CMOS LSI

1/3, 1/4 Duty General-Purpose LCD Driver

Overview

The LC75813E and LC75813T are 1/3 duty and 1/4 duty general-purpose LCD drivers that can be used for frequency display in electronic tuners under the control of a microcontroller. The LC75813E and LC75813T can drive an LCD with up to 344 segments directly. The LC75813E and LC75813T can also control up to 8 general-purpose output ports. Since the LC75813E and LC75813T use separate power supply systems for the LCD drive block and the logic block, the LCD driver block power-supply voltage can be set to any voltage in the range 2.7 to 6.0 volts, regardless of the logic block power-supply voltage.

Features

- Switching between 1/3 duty and 1/4 duty drive techniques under serial data control.
- Switching between 1/2 bias and 1/3 bias drive techniques under serial data control.
- Up to 261 segments for 1/3 duty drive and 344 segments for 1/4 duty drive can be displayed.
- Serial data input supports CCB format communication with the system controller.
- Serial data control of the power-saving mode based backup function and all the segments forced off function.
- Serial data control of switching between the segment output port and the general-purpose output port functions.
- Serial data control of frame frequency for common and segment output waveforms.
- High generality, since display data is displayed directly without decoder intervention.
- Independent VLCD for the LCD driver block (VLCD can be set to any voltage in the range 2.7 to 6.0 volts, regardless of the logic block power-supply voltage.)
- The $\overline{\text{INH}}$ pin can force the display to the off state.
- RC oscillator circuit

Serial Data Transfer Example

1. 1/3 duty

- ① When 175 or more segments are used
All 312 bits of serial data must be sent.

- ② When fewer than 175 segments are used

Either 104 or 208 bits of serial data may be sent, depending on the number of segments used. However, the serial data shown below (the D1 to D87 display data and the control data) must be sent.

2. 1/4 duty

- ① When 261 or more segments are used
All 416 bits of serial data must be sent.

- ② When fewer than 261 segments are used

Either 104, 208 or 312 bits of serial data may be sent, depending on the number of segments used. However, the serial data shown below (the D1 to D88 display data and the control data) must be sent.

Control Data Functions

1. P0 to P3: Segment output port/general-purpose output port switching control data.

These control data bits switch the S1/P1 to S8/P8 output pins between their segment output port and general-purpose output port functions.

Control data				Output pin state								
P0	P1	P2	P3	S1/P1	S2/P2	S3/P3	S4/P4	S5/P5	S6/P6	S7/P7	S8/P8	
0	0	0	0	S1	S2	S3	S4	S5	S6	S7	S8	
0	0	0	1	P1	S2	S3	S4	S5	S6	S7	S8	
0	0	1	0	P1	P2	S3	S4	S5	S6	S7	S8	
0	0	1	1	P1	P2	P3	S4	S5	S6	S7	S8	
0	1	0	0	P1	P2	P3	P4	S5	S6	S7	S8	
0	1	0	1	P1	P2	P3	P4	P5	S6	S7	S8	
0	1	1	0	P1	P2	P3	P4	P5	P6	S7	S8	
0	1	1	1	P1	P2	P3	P4	P5	P6	P7	S8	
1	0	0	0	P1	P2	P3	P4	P5	P6	P7	P8	

Note: Sn (n = 1 to 8): Segment output ports
Pn (n = 1 to 8): General-purpose output ports

Also note that when the general-purpose output port function is selected, the output pins and the display data will have the correspondences listed in the tables below.

Output pin	Corresponding display data	
	1/3 duty	1/4 duty
S1/P1	D1	D1
S2/P2	D4	D5
S3/P3	D7	D9
S4/P4	D10	D13
S5/P5	D13	D17
S6/P6	D16	D21
S7/P7	D19	D25
S8/P8	D22	D29

For example, when 1/4 duty drive scheme is used, if the general-purpose output port function is selected for the S4/P4 output pin, that output pin will output a high level (V_{LCD}) when the display data D13 is 1, and a low level (V_{SS}) when the D13 is 0.

2. DR: 1/2 bias drive or 1/3 bias drive switching control data

This control data bit selects either 1/2 bias drive or 1/3 bias drive.

DR	Bias drive scheme
0	1/3 bias drive
1	1/2 bias drive

3. DT: 1/3 duty drive or 1/4 duty drive switching control data

This control data bit selects either 1/3 duty drive or 1/4 duty drive.

DT	Duty drive scheme	Output pin state (COM4/S87)
0	1/4 duty drive	COM4
1	1/3 duty drive	S87

Note: COM4: common output
S87: segment output

4. FC: Common and segment output waveforms frame frequency setting control data

This control data bit sets the frame frequency for common and segment output waveforms.

FC	Frame frequency f0 [Hz]
0	$\frac{f_{osc}}{384}$
1	$\frac{f_{osc}}{192}$

5. SC: Segments on/off control data

This control data bit controls the on/off state of the segments.

SC	Display state
0	On
1	Off

However, note that when the segments are turned off by setting SC to 1, the segments are turned off by outputting segment off waveforms from the segment output pins.

6. BU: Normal mode/power-saving mode control data

This control data bit selects either normal mode or power-saving mode.

BU	Mode
0	Normal mode
1	Power saving mode (The OSC pin oscillator is stopped, and the common and segment output pins go to the V _{SS} level. However, the S1/P1 to S8/P8 output pins that are set to be general-purpose output ports by the control data P0 to P3 can be used as general-purpose output ports.)

Note: This applies to the case where the S1/P1 to S8/P8 output pins are set to be segment output ports.

LC75813E, 75813T

For example, the table below lists the segment output states for the S11 output pin.

Display data				Segment output pin (S11) state
D41	D42	D43	D44	
0	0	0	0	The LCD segments corresponding to COM1, COM2, COM3, and COM4 are off.
0	0	0	1	The LCD segment corresponding to COM4 is on.
0	0	1	0	The LCD segment corresponding to COM3 is on.
0	0	1	1	The LCD segments corresponding to COM3 and COM4 are on.
0	1	0	0	The LCD segment corresponding to COM2 is on.
0	1	0	1	The LCD segments corresponding to COM2 and COM4 are on.
0	1	1	0	The LCD segments corresponding to COM2 and COM3 are on.
0	1	1	1	The LCD segments corresponding to COM2, COM3, and COM4 are on.
1	0	0	0	The LCD segment corresponding to COM1 is on.
1	0	0	1	The LCD segments corresponding to COM1 and COM4 are on.
1	0	1	0	The LCD segments corresponding to COM1 and COM3 are on.
1	0	1	1	The LCD segments corresponding to COM1, COM3, and COM4 are on.
1	1	0	0	The LCD segments corresponding to COM1 and COM2 are on.
1	1	0	1	The LCD segments corresponding to COM1, COM2, and COM4 are on.
1	1	1	0	The LCD segments corresponding to COM1, COM2, and COM3 are on.
1	1	1	1	The LCD segments corresponding to COM1, COM2, COM3, and COM4 are on.

1/3 Duty, 1/3 Bias Drive Technique

The $\overline{\text{INH}}$ pin and Display Control

Since the IC internal data (1/3 duty: the display data D1 to D261 and the control data, 1/4 duty: the display data D1 to D344 and the control data) is undefined when power is first applied, applications should set the $\overline{\text{INH}}$ pin low at the same time as power is applied to turn off the display (This sets the S1/P1 to S8/P8, S9 to S86, COM1 to COM3, and COM4/S87 to the V_{SS} level.) and during this period send serial data from the controller. The controller should then set the $\overline{\text{INH}}$ pin high after the data transfer has completed. This procedure prevents meaningless displays at power on. (See Figures 3 and 4.)

Notes on the Power On/Off Sequences

Applications should observe the following sequences when turning the LC75813E and LC75813T power on and off.

- At power on: Logic block power supply (V_{DD}) on \rightarrow LCD driver block power supply (V_{LCD}) on
- At power off: LCD driver block power supply (V_{LCD}) off \rightarrow Logic block power supply (V_{DD}) off

However, if the logic and LCD driver block use a shared power supply, then the power supplies can be turned on and off at the same time.

Notes on Controller Transfer of Display Data

Since the LC75813E and LC75813T accept the display data (D1 to D261) divided into three separate transfer operations when using 1/3 duty drive scheme and the data (D1 to D344) divided into four separate transfer operations when 1/4 duty drive, we recommend that applications transfer all of the display data within a period of less than 30 ms to prevent observable degradation of display quality.

Sample Application Circuit 1

1/3 Duty, 1/2 Bias (for use with normal panels)

Note: $*2$ When a capacitor except the recommended external capacitance ($C_{osc} = 1000 \text{ pF}$) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF.

Sample Application Circuit 2

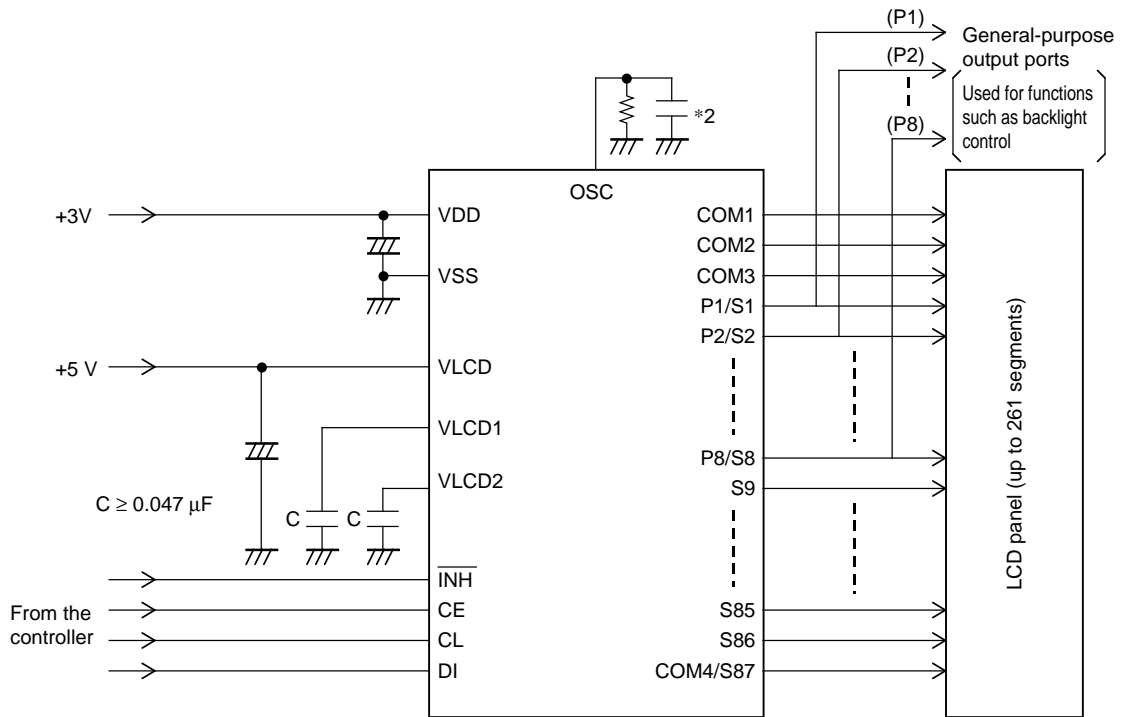

1/3 Duty, 1/2 Bias (for use with large panels)

Note: $*2$ When a capacitor except the recommended external capacitance ($C_{osc} = 1000 \text{ pF}$) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF.

Sample Application Circuit 3

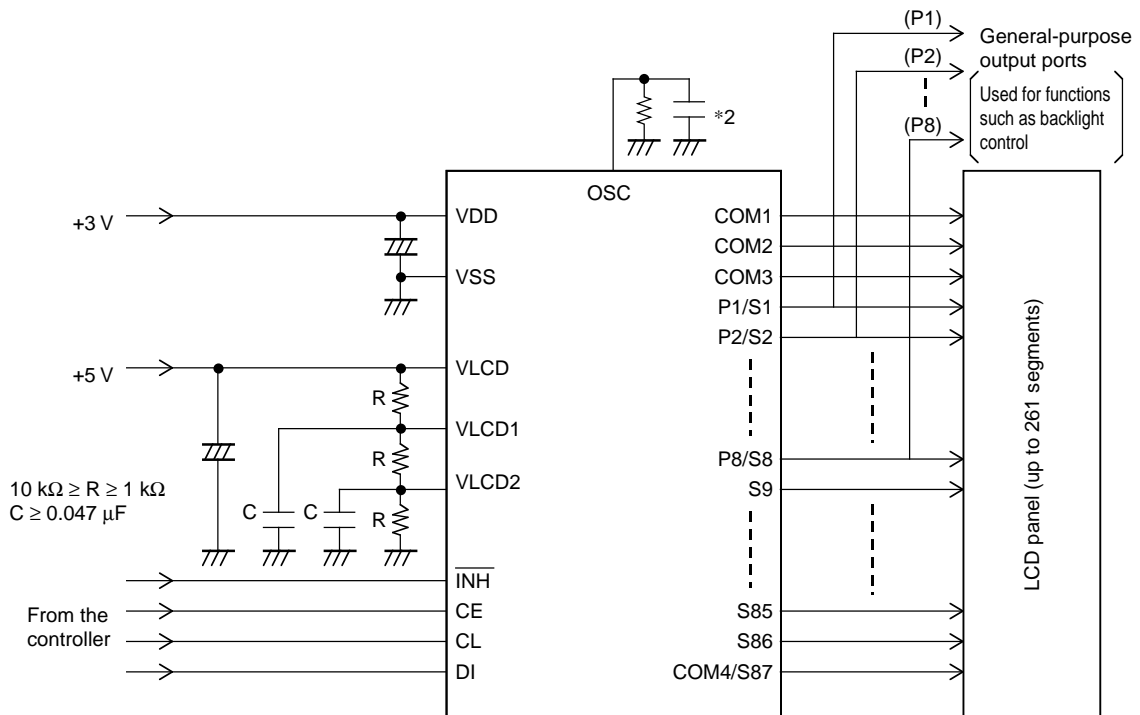

1/3 Duty, 1/3 Bias (for use with normal panels)

Note: *2 When a capacitor except the recommended external capacitance ($C_{osc} = 1000 \text{ pF}$) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF.

Sample Application Circuit 4

1/3 Duty, 1/3 Bias (for use with large panels)

Note: *2 When a capacitor except the recommended external capacitance ($C_{osc} = 1000 \text{ pF}$) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF.

Sample Application Circuit 5

1/4 Duty, 1/2 Bias (for use with normal panels)

Note: $*2$ When a capacitor except the recommended external capacitance ($C_{osc} = 1000 \text{ pF}$) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF.

Sample Application Circuit 6

1/4 Duty, 1/2 Bias (for use with large panels)

Note: $*2$ When a capacitor except the recommended external capacitance ($C_{osc} = 1000 \text{ pF}$) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF.

Sample Application Circuit 7

1/4 Duty, 1/3 Bias (for use with normal panels)

Note: *2 When a capacitor except the recommended external capacitance ($C_{osc} = 1000 \text{ pF}$) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF.

Sample Application Circuit 8

1/4 Duty, 1/3 Bias (for use with large panels)

Note: *2 When a capacitor except the recommended external capacitance ($C_{osc} = 1000 \text{ pF}$) is connected the OSC pin, we recommend that applications connect the OSC pin with a capacitor in the range 220 to 2200 pF.
